Empire of wallpaper

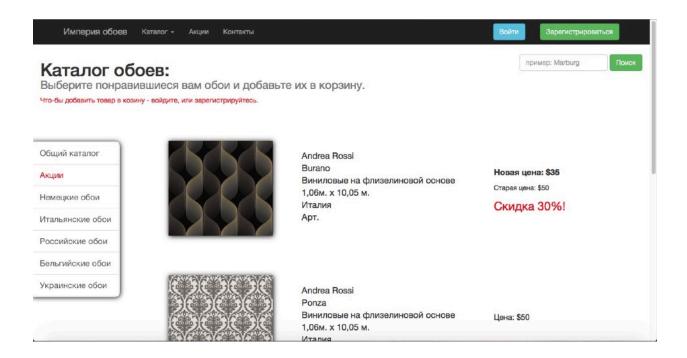

A simple web store of wallpaper:)

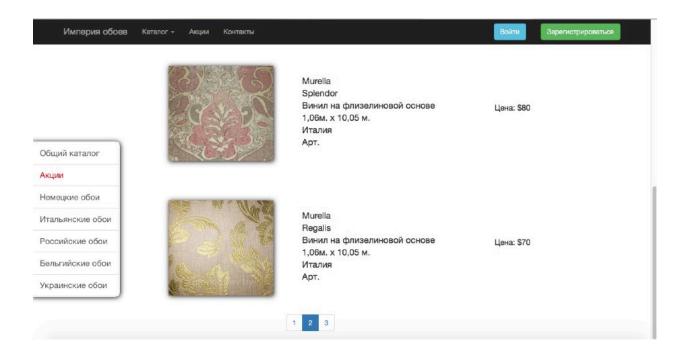

Hi! I just wanna show you my study project from HTP of Belarus (its front-end side). Well, let's start it!

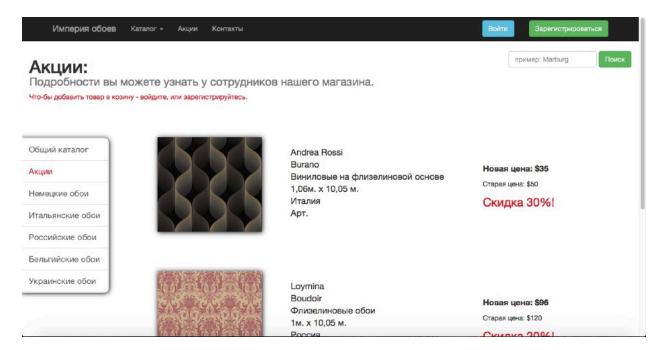

How you can see this is a main page. Here are available: log in/sign up, catalog, sales page and contacts page.

This is a catalog. Here you can see the wallpapers with price and description, choose produce country or make a search.

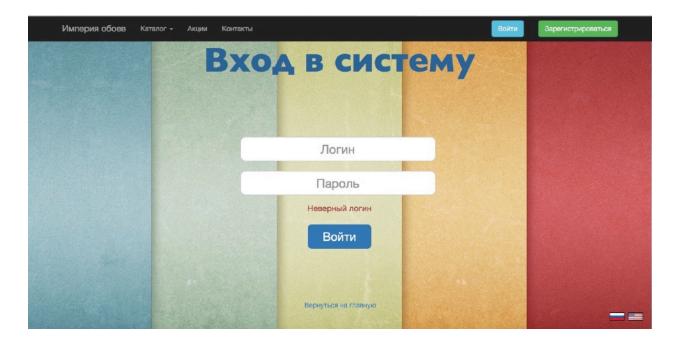

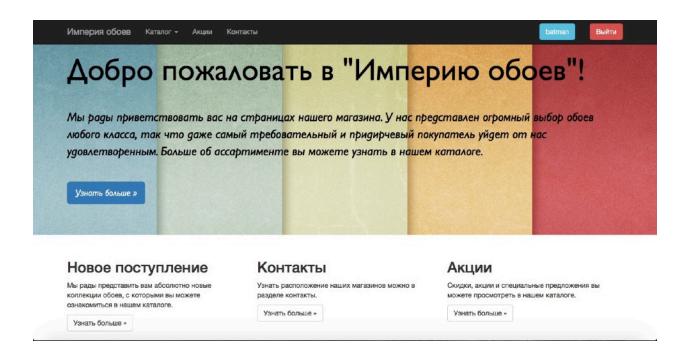

The sales page. Here is the price, auto counted with sale percents.

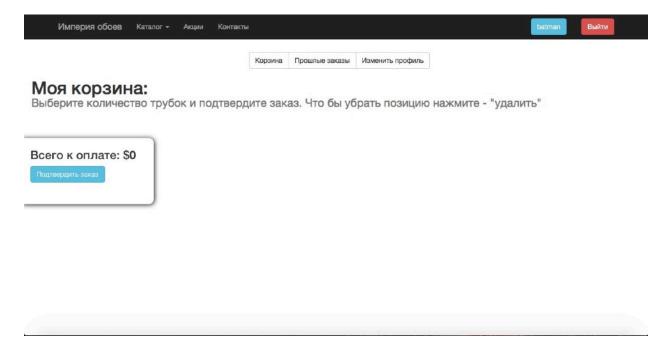

Login page. With validation on JavaScript and server side.

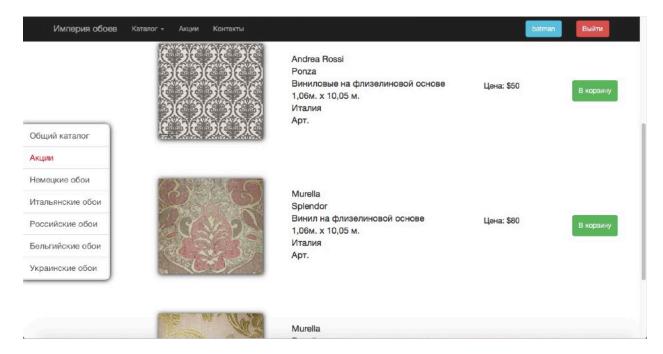

We were login like Batman 8-)

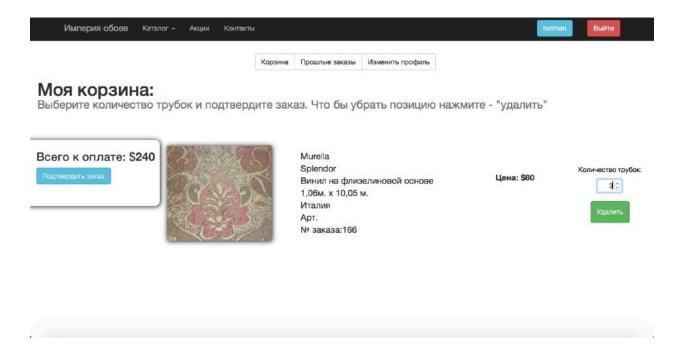

The basket. It's still empty. Let's fill it.

Choose the goods.

Quantity. And click «confirm the order».

The password was hashed with local parameter and salt.

That's all. Thanks for attention:)
